

AlgaePool leads the blue economy by transforming shipping containers into smart cultivation systems for spirulina and sustainable alternative proteins.

Cultivating microalgae in volume and no longer on the surface is the economical solution to avoid excessive temperatures... even in the south of Tunisia in the middle of summer, the temperature of a swimming pool does not exceed 40°C.

A 2 meters deep pool is a stack of 20 optimized 10 cm deep ponds... if we know how to quickly bring the biomass from the bottom to the surface for photosynthesis... precisely the system that we have mastered for almost 15 years does it perfectly and in addition above the bubbling of CO₂, and the purification of the culture medium.

Reducing the size of a pool by 20 is undoubtedly the opportunity to be able to settle in small spaces... in town or vicinity?

A 2 meters deep pool... it's a swimming pool, why not above ground, a good way to be able to move it if necessary.

Our commitments

We actively drive the green economy through sustainable technologies and ecosystem engagement.

Our values

We deliver innovative, reliable, and rigorous solutions, built by listening to our teams and customers, with agility and flexibility to meet every challenge.

Our mission

Developing modular, connected solutions for sustainable microalgae production to drive ecological transition and a greener economy.

AlgaePool vs Raceway

	AlgaePool
Emprise au sol	30 m ²
Délai d'installation	1 semaine
Installation déplaçable	1 semaine
Délai d'installation	OUI
Résistance aux vents violents	18/20
Résistance à la Grêle	18/20

	AlgaePool
Perte d'eau par évaporation	30 l/jour
Surchauffe des cultures au-delà de 42°C	18/20
Injection de Co2	18/20
Chauffage ou éclairage des cultures	18/20
Budget d'installation en Tunisie par m ²	250 TND

Project study

Our custom project studies delve into the needs and objectives of our clients. Our custom project studies delve into the needs and objectives of our clients.

Our commitment goes beyond that: we believe in the realization of every idea. From conceptualization to implementation, we support our clients, providing them with our expertise and resources.

Do you want to make your microalgae production project a reality? We invite you to fill out the form below as accurately as possible. You can also download it and send it back to us by email.

Container Construction

We specialize in converting shipping containers into fully functional microalgae production units. Our team of experts designs and builds custom containers tailored to your specific needs and requirements.

Each container is equipped with state-of-the-art technology for optimal algae cultivation, including climate control, lighting systems, and automated monitoring.

From design to installation, we handle every aspect of the construction process, ensuring you receive a turnkey solution ready for immediate operation.

Training

We offer specialized training in the field of microalgae production. Our comprehensive training programs are designed to cover the use of the AlgaePool, project management specific to this industry, and other essential aspects.

Our training sessions, adapted to different skill levels, combine theory and practice. Whether you are a beginner or an expert, our goal is to provide you with the knowledge and skills you need to excel in the microalgae production sector.

Sale & Rental Options

Whether you're looking to purchase or rent, we offer flexible options for our AlgaePool containers. Our solutions are designed to meet the needs of businesses of all sizes, from startups to established enterprises.

Rental options provide an excellent opportunity to test our technology before making a long-term investment, while our purchase options offer complete ownership and customization possibilities.

All our containers come with comprehensive support, maintenance services, and training to ensure your success in microalgae production.
